## **INTEGRATED COMPUTER SOLUTIONS, INC. AMONG COMPANIES AWARDED STATE OF MISSISSIPPI NETWORK SECURITY SERVICES CONTRACT**

### **FOR IMMEDIATE RELEASE**

**Montgomery, AL, May 26, 2010**

Integrated Computer Solutions, Inc. (ICS) announced today that it is one of a select number of companies to be awarded a contract by the State of Mississippi for the acquisition of information technology (IT) security consulting services. Granted through the State of Mississippi's Department of Information Technology Services, this contract allows Mississippi state, county, and municipal agencies to secure IT security services for LAN, WAN, and other network based systems.

This is the second contract that the State has awarded to ICS this year. The first, presented in March, allows state organizations to acquire network security and risk assessment services from a select number of companies, including ICS.

"We are pleased to broaden our relationship with the State of Mississippi. With this award, Mississippi government agencies and schools can now access ICS' best-in-class cyber security consulting as they proactively protect the citizens of Mississippi and improve the State's IT security posture " said Chip Schuneman, COO of ICS, Inc.

According to Schuneman, the security consulting services contract addresses the practical daily information technology and IT security needs of Mississippi State agencies, allowing these organizations to secure their information resources and streamline electronic communications.

"ICS can help secure communications and collaboration among agencies and departments in a manner that meets the highest technical and policy standards for legislative and regulatory compliance," Schuneman stated. "This contract allows ICS to ease the daily operational burden on these agencies so that they can continue to focus on the citizens that they serve," he said.

With over twelve years experience in providing state and federal agencies with 5-star, military grade, IT security services and solutions, ICS offers a dynamic portfolio of security-driven IT solutions, including risk assessments, vulnerability assessments, network penetration tests, web application assessments, disaster recovery planning and solutions, business continuity and continuity of government planning services, bulk encryption; and data leak prevention solutions. The company operates under similar contracts with the State of Florida and the State of Alabama.
